Step 1: Assemble Frame

Arrange pieces on the floor as shown in the diagram below. Assemble frame by securing CB9's to the F27s and F60. When locking be sure to turn each cam a little bit and then go back and tighten to the proper tension. Take care to turn locks only half a turn. Slide the IB2 into the extrusion to connect sides. Tighten to the proper tension to lock extrusions together. Lights come adhered to the F27s. Ensure lighting strips on top and bottom are connected.

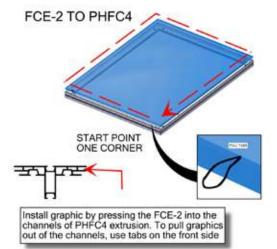

Step 2: Apply Graphics & Attach Feet

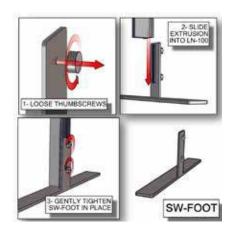

Apply graphic(s) by pressing the FCE-2 edge of graphic into the channel of the extrusion. Start in upper left corner, go across the top and then down the sides to the bottom. Assure each graphic is tightly inserted. When taking graphics off, take care to gently pull by attached pull tab. To adhere foot to frame, loosen thumbscrews from foot. Slide extrusion into LN-100 groove. Tighten to the proper tension to secure supporting feet.

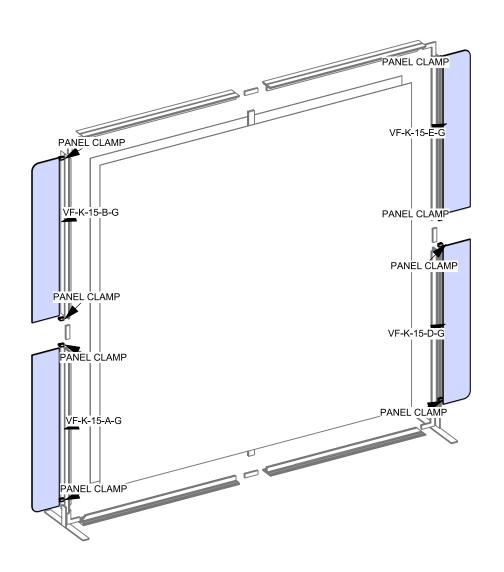

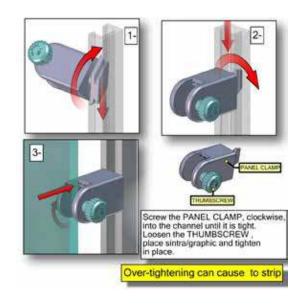

Step 3: Attach Accent Wings

To attach accent wings, screw panel clamp clockwise, into the channel until it is tight. Loosen the thumbscrew. Place rigid sintra graphics and tighten thumbscrew to secure. Overtightening can strip thumbscrew and damage graphic. Once all graphics are in place, connect to power strip to illuminate backwall.

Slide light clip onto the LIGHT.
 Then slide the LIGHT into the channel at an angle and then gently lower down.
